

Press release

EJOT® participates in the bauTage event 2021 Expert lecture and digital stand about CROSSFIX®

The publisher "Konradin" is one of the leading specialist publishers in the industry for architecture, interior design, construction and design and is organizing the bauTage event from January 11-18, 2021 as a web conference with an accompanying virtual exhibit. EJOT is part of the event with an expert lecture on the subject of "CROSSFIX® – the modern, rear-ventilated facade", and provides information about the innovative substructure system for the rear-ventilated facade (VHF) at a digital stand.

Completely new design possibilities for the rear-ventilated facade

Rear-ventilated facades are characterised by structurally separated insulation and cladding of the system. This separation leads to many advantages in technical and design aspects. The new [CROSSFIX® substructure system](#) made of stainless steel enables maximum flexibility and energy efficiency as well as the highest load-carrying capacities and leads to an increase in usable area. CROSSFIX® therefore offers completely new design possibilities. It is a complete system made up of several high-quality EJOT products that are optimally coordinated with one another.

In addition to the virtual stand, EJOT will hold an expert lecture on this topic on January 11, 2021 from 2 p.m. to 3 p.m. as part of the innovation days. During the entire event, the EJOT sales engineers are available to answer all questions about the EJOT products and services in chats.

Interested parties can register for the event online at <https://www.arcguide.de/themen/bautage2021/>.

About EJOT®

EJOT is a medium-sized group of companies specialising in advanced fastening technology. EJOT customers are mainly from the automotive and supplier industry, telecommunications and consumer electronics as well as the building industry. EJOT – with over 3,500 employees in 36 subsidiaries, more than 24,000 products and almost one hundred years of company history.

The EJOT Construction Division caters to selected segments of the building industry. This includes professional applications on building facades and installation solutions for technical facilities inside the building. The main products are drilling and sealing screws, nylon anchors, chemical and mechanical anchors as well as fasteners for flat roofs and solar applications.

Whether it is the construction of the highest tower, the most spectacular nuclear reactor protective cover or the southernmost polar station in the world – EJOT customers rely on many years of experience in the building industry.
