1,118 (including spaces)

The new EJOFAST® JF3-Plus adds a powerful product to the proven EJOFAST® self-drilling screw range from EJOT. The new, ETA-certified EJOFAST® JF3-Plus has significantly improved load-bearing capacity in timber and is available in diameters of 4.9 and 6.8 mm. The self-drilling screw is suitable for fastening profiled steel and aluminium sheets or sandwich panels to timber substructures.

The strongest, cleanest and safest self-drilling screw from EJOT

The single-start self-drilling screws of the EJOFAST® family have a unique tip geometry without a classic cutting edge. The optimised and concavely drawn-out tip of the new EJOFAST® Plus self-drilling screws enables considerably safer application to the surface. Displacement or slipping is almost impossible. The special shape of the thread allows for a high assembly speed, while at the same time the load-bearing capacity values of the EJOFAST® Plus in timber have been improved once again.

The slim, single-fluted drill tip means no sharp-edged swarf are produced that get stuck in the material and require time-consuming removal. This saves time during assembly.

About EJOT®

The EJOT Construction Division caters to selected segments of the building industry. This includes professional applications on building facades and installation solutions for technical facilities inside the building. The main products are drilling and sealing screws, anchors, mounting elements and profiles for External Thermal Insulation Composite Systems (ETICS), chemical and mechanical anchors as well as fasteners for flat roofs and solar applications.

Whether it is the construction of the highest tower, the most spectacular nuclear reactor protective cover or the southernmost polar station in the world – EJOT customers rely on many years of experience in the building industry.

EJOT – that is more than 3,700 employees in 38 subsidiaries, more than 24,000 products and almost one hundred years of company history.
