EJOFAST® Plus

The new generation of EJOFAST® self-drilling screws

EJOFAST® Plus self-drilling screws

The new generation of self-drilling screws for the wooden substructure

The new EJOFAST® Plus self-drilling screws, with their concave and particularly slender tip, enable significantly safer placement on the surface and a high screwing speed. Displacement or slipping is almost impossible. At the same time, the load-bearing capacity values were improved once again.

The slim, single-fluted drill tip products no sharp-edged chips that get stuck in the material and require time-consuming removal.

Clever & clean

For skid-free application and reduced swarf fastening
for a variety of applications

More safety

through improved load-carrying capacity values in wood

Extremely high installation speed

through specially designed thread geometry

Better pull-out strength

through optimized installation depth

Point-to-point attachment to metal surfaces

reduces slipping and scratching of the surface during assembly

Reduced-swarf screwing

does not produce sharp-edged swarf, eliminating any cleaning process

Low splitting effect in timber

thanks to slender concave point geometry
