Mechanically fastened roof waterproofing systems Updated and optimised ETA 07/0013 now available!

Author:
Katrin Strübe

Number of characters:
956 (including blanks)

An updated and fundamentally optimised version of ETA 07/0013 for mechanically fastened roof waterproofing systems is now available. The revised approval is compliant with the new "Design guideline for mechanically fastened roof waterproofing systems" (TS 17659), which was only published in January 2022. In addition, the new and improved ETA 07/0013 has been made clearer and more user-friendly.

Following a 'facelift', the new ETA is even easier to use thanks to its well-structured layout, clearly distinguishable tables and descriptive product illustrations. What's more, the updated ETA also offers greater technical detail, including optimised design values on additional substrates and material thicknesses as well as additional fastener combinations.

The new ETA 07/0013 is available to download on the EJOT website [<https://www.ejot.com/flat-roof-eta>].

About EJOT®

The Market Unit Construction caters to selected segments of the building industry. This includes professional applications on building facades and installation solutions for technical facilities inside the building. The main products are drilling and sealing screws, anchors, mounting elements and profiles for External Thermal Insulation Composite Systems (ETICS), chemical and mechanical anchors as well as fasteners for flat roofs and solar applications.

Whether it is the construction of the highest tower, the most spectacular nuclear reactor protective cover or the southernmost polar station in the world – EJOT customers rely on many years of experience in the building industry.

EJOT – that is more than 3,700 employees in 38 subsidiaries, more than 24,000 products and almost one hundred years of company history.
