EJOT was able to prevail in the vote for the DETAIL Product Award 2020 for the CROSSFIX® substructure system for the rear-ventilated facade (VHF) and thus win the coveted award. With the DETAIL Product Award, the renowned architecture magazine DETAIL honours innovative building products, systems and materials in cooperation with archipinion.

CROSSFIX® convinces the jury and readers

The submissions were assessed in a two-stage selection process, first by the DETAIL editorial team and then by interior designers, architects and specifiers, i.e. the readers of DETAIL. The products submitted were evaluated in particular according to the criteria of design, innovative character, functionality, sustainability and integration capability.

The CROSSFIX® substructure system was able to score across the board. "We are very happy to have received the DETAIL Product Award", says Mark Dreyer, EJOT sales engineer. "Winning the award shows that we are on the right track with our CROSSFIX® product development and that the system, with its individual freedom of design and in terms of energy efficiency, has its finger on the pulse of the times for ventilated facade construction."

The next opportunity to delve deeper into the subject of rear-ventilated facade construction with CROSSFIX® will be given to architects, specifiers, engineers and other interested parties from Jan 11 – 18, 2021 at the bauTage event of the publisher "Konradin" at <https://www.arcguide.de/themen/bautage2021/>.

Detailed information about CROSSFIX® can also be found at <https://www.ejot-crossfix.com/en/>.

About EJOT®

EJOT is a medium-sized group of companies specialising in advanced fastening technology. EJOT customers are mainly from the automotive and supplier industry,

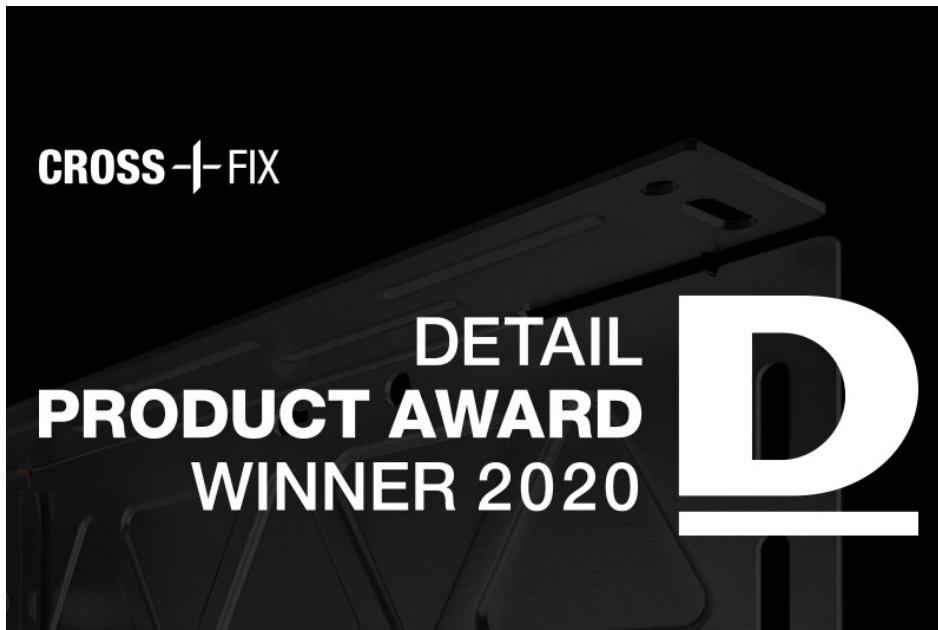

telecommunications and consumer electronics as well as the building industry. EJOT – with over 3,500 employees in 36 subsidiaries, more than 24,000 products and almost one hundred years of company history.

The EJOT Construction Division caters to selected segments of the building industry. This includes professional applications on building facades and installation solutions for technical facilities inside the building. The main products are drilling and sealing screws, nylon anchors, chemical and mechanical anchors as well as fasteners for flat roofs and solar applications.

Whether it is the construction of the highest tower, the most spectacular nuclear reactor protective cover or the southernmost polar station in the world – EJOT customers rely on many years of experience in the building industry.
